

Counts and shares, clearly.

One value. Two useful ways to display it.

Split	Samples		Share of total	
Training		87 500		70.0%
Validation		18 750		15.0%
Test		18 750		15.0%
Unassigned		0		0.0%

Illustrative dataset: 125,000 samples. Both columns use the same denominator. Zero has an empty track, with no artificial minimum bar length.

Explicit semantics

Raw count \gradbar[max=125000]{87500}

Share \gradbar[max=125000,value format=percent]{87500}
